The Future of Energy

The Benefits of Solar

THE SUN IS YOURS

How Does Solar Work?

THE SUN IS YOURS

- Solar panels are made from photovoltaic cell that convert sunlight into electricity by photovoltaic effect.
- Photovoltaic cells (also called solar cells or PV cells) are arranged together on a module. Modules are grouped in an array. Some of the arrays are set on special tracking devices to follow sunlight all day long.
- When sunlight strikes a solar cell, chemical reactions release electrons, generating electric current. This process is totally automatic.
- The photovoltaic effect produces DC (Direct Current) electricity, in turn converted into AC (Alternating Current) electricity by an important system component called the inverter.
- As a result, the system generates FREE power, without any action on your part.

Installation and Benefits

THE SUN IS YOURS

Easy Installation

- Solar panels are often mounted on the roof or on the ground and connected to the local electric grid, either supplying all the power directly to the home or pumping the excess back to the utility.
- Apart from reducing your electricity bill, homeowners can often sell any surplus electricity directly back to the utility at an attractive rate. This is known as net-metering.

Immediate Results

- The solar panels give you the opportunity to produce clean, affordable electricity, and dramatically reduce your electricity bill.
- The electrical energy from solar cells can be used for all your needs at home as well as for your business.

Preserve the Environment

THE SUN IS YOURS

The Ultimate Power Source

One minute of the sun's true potential could provide our planet with enough energy for one year. Sunlight shines everywhere and is accessible to anyone. Depending on your property's exposure to the sun, the solar panels can catch enough sun rays to power your house by themselves all year round.

Change for the Better

Traditional electricity comes from fossil fuels such as coal, oil and natural gas. When fossil fuels are burned to create energy, they emit toxic gases, responsible for global warming, greenhouse effects, climate change but also asthma and other respiratory malfunctions.

Going solar is not only an extraordinary way to save money, but also a great way to promote a healthier, more natural way of life: it is pollution-free!

Go Green

By using solar panels, within 30 years, a typical business will avoid the production of 227,836 Lbs of CO₂ (EIA,2009).

This is comparable to driving 248,729 miles in a car (over 30 times around the world!)

It is also equivalent to the absorption of 290 mature trees over their life time.

Going solar is economical and environmentally sound.

Save Money

THE SUN IS YOURS

Low Risk Investment, High Return

Installing a solar power system on your property is the best and safest way to invest your money today . By producing your own solar energy, you can reduce your electricity bill up to 100%.

Free yourself from skyrocketing prices

Prices for utilities increased 20% in the past 3 years and are expected to grow another 50% by 2016 (EIA, 2008). By producing your own energy, you are in control of your spendings.

Keeping the A/C on will not be a concern anymore.

Benefit from Incentives and Tax Rebates

Incentives and tax rebates can reduce your installation costs of almost 50%.

However, the more common solar becomes, the lower the rebates. So act now and save just like thousands of early-adopters and savvy spenders.

Increase Your Property Value

THE SUN IS YOURS

Houses and businesses sell better when they have an “extra something”. An efficient solar system is undoubtedly an added element to your property’s value. For each dollar you save on electricity, the value of your property grows by an estimated \$20.73.

The New York Times
April 14, 2007

“ \$1 reduction in annual energy costs would increase a home’s value by \$20.73. [...] If their reduction in monthly fuel bills exceeds the after-tax mortgage interest paid to finance energy efficiency investments, then they will enjoy positive cash flow for as long as they live in their homes and can also expect to recover their investment in energy efficiency when they sell their homes. ”

CNN Money.com
October 31, 2006

“ Go green, a smart home improvement

A study in Appraisal Journal found that for every utility-bill dollar saved annually because of an improvement, you gain \$10 to \$20 in property value. So if you can zero out a \$1,000 annual electric tab by installing solar, you'll get back \$10,000 to \$20,000 in home value. ”

Finance Your Installation

THE SUN IS YOURS

We believe that clean energy should be affordable for everyone

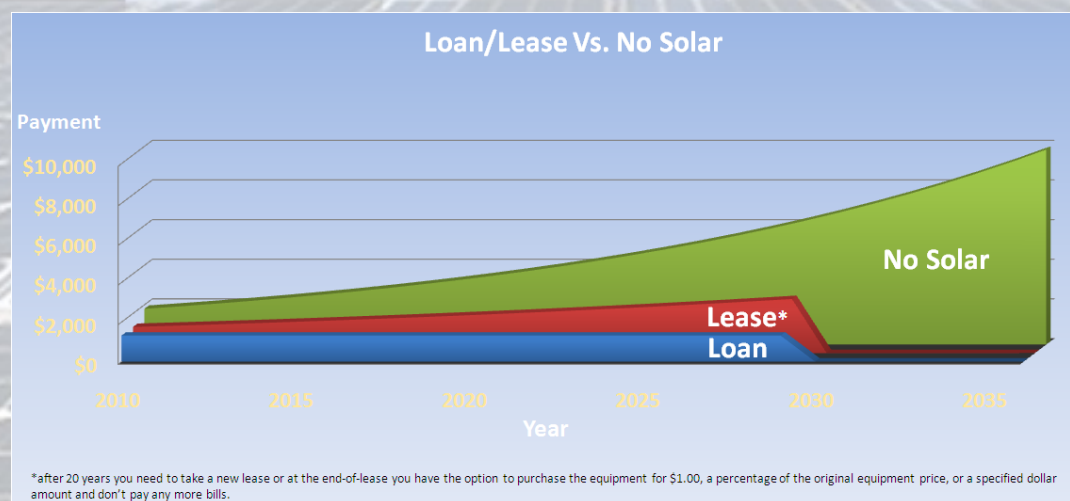

Purchasing a solar system has never been easier and more affordable. The Sun Is Yours has relationships with top-grade financial institutions that offer a growing array of options specifically designed to help homeowners **finance** or **lease** their residential solar power systems.

Depending on your individual solar parameters, you may even generate a **positive cash flow from the start**, by saving more on your electric bill than you pay for your new solar power system. And with the inevitable rise in the costs of your utility provider, your cash flow will get even better over time.

Our financing department works continuously to search the financing and leasing options to allow you to enjoy the benefits of solar power.

As a EGIA member, The Sun Is Yours can obtain to you some specials rates which are the best on the market.

Your the Sun Is Yours sales consultant can help you **customize** a plan to your needs.

The example above is for a solar system of 2.87 KW/year which represents a Net Investment of \$14,000.

Why Choose The Sun Is Yours

THE SUN IS YOURS

- We explain the whole process to you, upfront and in details. **No surprises**, no hidden costs.
- We provide technical expertise and supply the **best quality** products on the market.
- We work closely with expert designers and architects to respect the **aesthetic** of your property
- We offer **free cleaning** and **maintenance** on your system
- We provide a **25-Year** contractors warranty on the equipment and a **10-Year** installation warranty
- We provide more reasonable **costs** than most of our competitors
- We provide the best quality work in the industry by operating with **top of the line** equipment and tools.
